

Final project report

Project ID:	2002/4.14
Title:	Definition of the genetic conditions of the pentasil zeolites found at Mt Adamson (Northern Victoria Land): a key for the synthesis of new materials for heterogeneous catalysis.
Principal investigator:	M. Giovanna Vezzalini
Institution:	DIP. DI SCIENZE DELLA TERRA-Università di Modena e Reggio Emilia
Email:	mariagiovanna.vezzalini@unimore.it
Duration:	2 yearS (2002-2003)
Assigned funding:	€ 31.000 (funzionamento)+ 31.000 (materiale inventariabile)

Activities and results

Zeolites are natural materials that have increased enormously in industrial and economic importance in recent decades. Despite considerable research in industry into the potential uses of synthetic zeolites, natural phases retain their primary position even in this sector. From a methodological point of view the complexity of natural systems and advanced technological systems can be advantageously compared, working simultaneously on synthetic products and natural materials. In this sense the zeolites discovered recently in Antarctica can, not only significantly improve the knowledge of the corresponding synthetic phases, but also indicate the possibility of new methods for the synthesis of zeolitic materials. In particular the lower Si/Al ratio compared with analogous synthetic products, their formation in absence of an organic template, and the presence of calcium as a predominant extraframework cation, suggest the possibility of different conditions of synthesis from those currently applied in industry, and potential alternative applications for these materials.

The research work was aimed to the study of chemical, physical, structural, and applicative characterization of hydrothermal zeolites discovered at Mt. Adamson.

In particular we obtained the structural resolution of the monoclinic and tetragonal polytypes of tschernichite, the natural counterpart of synthetic zeolite beta (Alberti et al., 2002). The dehydration process of boggsite was studied through a single-crystal in-situ experiment (Zanardi et al., 2004). The structure of the synthetic zeolite ERS-10 (Zanardi et al., 2002) was solved starting from the structural data obtained on the natural Antarctic zeolite gottardiite. The interest of the industry for the zeolite occurrence in Antarctica is demonstrated by the collaboration with researchers of ENITECNOLOGIE.

The dehydration mechanism of tschernichite and boggsite (Cruciani et al., 2004) was also studied through in-situ X-ray powder diffraction experiments using synchrotron radiation.

Finally a review on the structural modifications and phase transitions induced by heating, and consequent dehydration, in microporous materials was published, where the thermal properties of the zeolites found at Monte Adamson (Victoria Land, Antarctica) are largely discussed (Alberti e Martucci, 2005).

E – thematic maps

--

F – patents, prototypes and data bases

--

G – exhibits, organization of conferences, editing and similar

--

H - formation (PhD thesis, research fellowships, etc.)

1. 1 annualità di un assegno di ricerca (Cristina Betti) periodo 1/1/2004-31/12/2004; Titolo: Caratterizzazione strutturale di silicati porosi e di nanomateriali in esso confinati.
2. 1 annualità di un assegno di ricerca (Rossella Arletti) periodo 1/6/2007-1/6/2008 (pro parte); Titolo: Interazioni host-guest e transizioni di fase indotte dalla pressione in materiali nano porosi di interesse tecnologico

Research units

1 - Responsabile / Principal investigator: M. Giovanna Vezzalini

Istituto di afferenza: Dipartimento di Scienze della Terra, Universita' di Modena e Reggio Emilia

Ermanno Galli-Professore Ordinario
Antonio Rossi-Professore Associato
Orazio Ferro-Assegnista

Programma Nazionale di Ricerche in Antartide (PNRA)

*2 - Responsabile / Principal investigator: **Alberto Alberti***

*Istituto di afferenza: Dipartimento di Scienze della Terra, **Universita' di Ferrara***

Michele Sacerdoti-Professore Ordinario

Giuseppe Cruciani-Professore Associato

Annalisa Martucci- Ricercatore Universitario

Stefano Zanardi-Dottorando

M.Cristina Betti-Dottorando

*3 - Responsabile / Principal investigator: **Simona Quartieri***

*Istituto di afferenza: Dip. Scienze della Terra, **Universita' di Messina***

Maurizio Triscari-Professore Associato

Giuseppe Sabatino-Assegnista

Date: 14/10/2008
