

Final project report

| | |
|-------------------------------|---|
| <i>Project ID</i> | 2004/3.02 |
| <i>Title</i> | Wilkes Basin/Transantarctic Mountains System Exploration (WISE) |
| <i>Principal investigator</i> | Prof. Emanuele Bozzo |
| <i>Institution</i> | Dipartimento per lo Studio del Territorio e delle sue Risorse, Universita' di Genova |
| <i>Email</i> | bozzo@dipteris.unige.it |
| <i>Duration</i> | 3 years |
| <i>Assigned funding</i> | 100.000,00 Euro |

Activities and results

Within the framework of *WISE/ISODYN* we undertook a joint Italian-British investigation over northern Victoria Land and the adjacent Wilkes Subglacial Basin (WSB). Extensive new geophysical and geological datasets were acquired over the study region during the 2005-06 Antarctic field season.

Our main objectives were:

- 1) to provide new geophysical constraints for the WSB, to help comprehend the influence of basal boundary conditions (i.e topography, hydrology and geology) on the stability of the East Antarctic Ice Sheet (EAIS);
- 2) to acquire new geophysical data to study crustal architecture and tectonic evolution of the TAM and WSB;
- 3) to deduce the Neogene environmental and geodynamic history of the TAM, by investigating coeval magmatic rocks;
- 4) to gain new insight into the Ross-Orogen and the transition to the East Antarctic Craton;
- 5) to extend studies of Cenozoic tectonics towards the "backside" of the TAM;
- 6) to fly some aerogeophysical profiles over the Dome C subglacial lake district.

To address these objectives we utilised a multi-disciplinary approach including: airborne geophysics (radar, aeromagnetic and aerogravity methods); seismology; deep electrical conductivity techniques; petrological and paleoenvironmental studies of Cenozoic volcanics; petrological and petromagnetic investigations of Ross-age and Precambrian basement rocks and; structural geology and thermochronology.

Field activities, techniques and preliminary results were reported in a special issue of *Terra Antarctica Reports* in 2007. Scientific results have been presented at several international conferences, e.g. IUGG 2007, ISAES 2007, AGU Fall Meeting 2006, 2007 & 2009, SCAR Meeting 2008, and in several peer-reviewed publications. An international workshop entitled "Geological and Geophysical Investigations from the Transantarctic Mountains to Dome C" was organised in Genoa in September 2008.

The most significant results from the airborne geophysics component are: 1) the discovery of much deeper and more extensive subglacial basins beneath the EAIS than previously mapped, which may make the ice-sheet more vulnerable to climate and ocean warming. Tracing these deep basins from the interior to the coast is the focus of a major new international proposal; 2) the interpretation that the WSB is linked to Neoproterozoic rifting and early Ross-age back-arc basin formation. Recognition of this tectonic setting has significant implications for reconstructions of East Antarctica within Rodinia and Gondwana.

New glacio-volcanic studies over NVL shed new light into the age of the transition from a wet-based and more dynamic ice-sheet to a more stable ice-sheet. The major switch occurred between 9.7 and 7.5 Ma in NVL, although temporary switches in thermal regime occurred both before and after the main event. This has significant implications for Neogene ice-sheet mass balance and global sea-level.

E – thematic maps

--

F – patents, prototypes and data bases

1. New database of aeromagnetic anomalies for the TAM and WSB. To be released to ADMAP-community at SCAR meeting (August 2010).
2. New databases of subglacial topography and gravity anomalies. To be released in 2011 for BEDMAP II and AntGP initiatives.

G – exhibits, organization of conferences, editing and similar

1. The Italian-British Antarctic Geophysical and Geological Survey in northern Victoria Land 2005-06- towards the International Polar Year 2007-08. *Terra Antarctica Reports* 13, 2007, edited by E. Bozzo and F. Ferraccioli, 110 pp.
2. International workshop: *Geological and Geophysical Investigations from the Transantarctic Mountains to Dome C*- Organised by E. Bozzo and F. Ferraccioli (September 2008- Univ. of Genova- DIPTERIS).

H - formation (PhD thesis, research fellowships, etc.)

1. NERC-funded PhD on "New aerogeophysical interpretations in East Antarctica" (3 years). Started in 2009.
